BARNESVILLE WATER UPDATE

Providing a quality water supply to Barnesville residents requires ongoing maintenance, routine adjustment, service or sometimes replacement. Many duties are seasonal, while others are water flow related. Winterization of hydrants is very important because of our high water table. During this time of year, water mains have been flushed of scale and iron deposits. After that, the hydrant body, when shut off from the water main, is then pumped of excess water. The completion of these procedures assures that every water main and hydrant is in good working order for both clean water service and fire protection within the city.
