

We need

YOU!

TO TEST YOUR WATER PIPES FOR LEAD!

As part of the City of Barnesville's commitment to provide safe drinking water to all our residents, we consistently comply with all regulations of the US EPA Safe Drinking Water Act.

Lead pipes pose concerns. Recent changes to the lead and copper rule require all Community Water Systems, across the United States to compile an inventory of all water service lines.

The purpose of this inventory is to accurately determine the number of lead service lines in the Barnesville distribution system. In homes constructed before the 1940's there is a higher likelihood of lead service lines, but these lines may exist in homes built as late as the 1970's.

The City of Barnesville is asking all of our residents to help with this process.

**PLEASE READ INSTRUCTIONS
ON THE BACK OF THIS CARD**

HOW TO PERFORM A LEAD/COPPER TEST ON your water service line

To comply this federal requirement, the City of Barnesville is asking each home owner to perform a **lead/copper test** on their service line and submit a picture along with their name, address and phone number to the following email address.

Leadandcopper@barnesvillemn.com

The step-by-step process to complete this testing on your water service line is available by scanning the QR code below

OR go to <https://apps.npr.org/find-lead-pipes-in-your-home/en/#intro> **OR** on the City's website - www.barnesvillemn.com

If you would like help performing this test on your water service line, please call to schedule an appointment with one of the Barnesville Water Technicians.
